go off or your engine begins to overheat. You may also discover a coolant leak by seeing coolant pool up under your car.

Reasons for Coolant Leaks in Your Audi

How it's done: The coolant is drained into a suitable container and the coolant recovery reservoir cap is removed. The old coolant recovery reservoir is disconnected from all of the hoses and pulled free of the vehicle. The new coolant recovery reservoir is installed into the vehicle and secured. The coolant hoses are installed and secured using new clamps.

SOURCE: My 2001 AUDI TT Quattro Roadster Wind Deflector Hi, it is the drive band for the deflector. There is a single motor behind the driver, this drive the two screws via a band. It is hard to see but when the roof is in the down position remove the trim and you can see both screws which raise the glass.
