3 Phase Motor Winding Resistance

Loss of insulation resistance of an electric motor is one of the first signs of motor failure. For a three-phase motor, the isolation resistance can usually be measured between each motor winding or phase and between each motor stage and motor frame (earth) by an insulation

Thermal deterioration of insulation in one phase of the stator winding can result from unequal voltage between phases.

Unequal voltages usually are caused by unbalanced loads on the power source, a poor connection at the motor terminal, or a high resistance contact (weak spring).
