So the probability to win a prize the first time you play is $p + (1-p)p + (1-p)^2 p + \dots = p \cdot [1 + (1-p) + (1-p)^2 + \dots] = p \cdot \frac{1}{1-(1-p)} = \frac{p}{p} = 1$. Clearly M has a geometric distribution, with parameter p .

4.12 The "probability that your friend wins" is equal to $p + p(1-p)^2 + p(1-p)^4 + \dots = p \cdot [1 + (1-p)^2 + (1-p)^4 + \dots] = p \cdot \frac{1}{1-(1-p)^2} = \frac{p}{1-(1-p)^2} = \frac{p}{2-p}$.

In probability theory, the law of large numbers (LLN) is a theorem that describes the result of performing the same experiment a large number of times. According to the law, the average of the results obtained from a large number of trials should be close to the expected value and will tend to become closer to the expected value as more trials are performed.
