The assigned textbook for the Galaxies course was "Galaxies in the Universe: An introduction" by Sparke and Gallagher. This latter book is packed with a lot of mathematics, but I frankly found that it did not supply as clear or as concise an entry point to the study of galaxies, as the Jones/Lambourne book did.

Galaxies 101: A galaxy is a massive, gravitationally bound system consisting of stars, stellar remnants, an interstellar medium of gas and dust, and, dark matter, an important but poorly understood component. The word galaxy is derived from the Greek galaxias (γαλαξίας), literally "milky", a reference to the Milky Way.

Introduction to Galaxies. Figure 1: Spiral Galaxy. NGC 6946 is a spiral galaxy also known as the "Fireworks galaxy.". It is at a distance of about 18 million light-years, in the direction of the constellations Cepheus and Cygnus. It was discovered by William Herschel in 1798. This galaxy is about one-third the size of the Milky Way.

## **Introduction to Galaxies - Astronomy**

A galaxy is a huge swarm of stars, gas, dust, and dark matter held together by gravity. Stars revolve around the center of a galaxy. The galaxy's gravity holds them in their orbits. A galaxy's center is packed with older stars. The distance between stars is enormous, however.
