The mathematics of general relativity is complex. In Newton's theories of motion, an object's length and the rate at which time passes remain constant while the object accelerates, meaning that many problems in Newtonian mechanics may be solved by algebra alone. In relativity, however, an object's length and the rate at which time passes both change appreciably as the object's speed approaches ...

Graphing Functions of Two Variables. The graph of a function $f(x,y)$ of two variables is the set of all points $(x,y,f(x,y))$ where (x,y) is in the domain of f . This creates a surface in space. Figure 12.1: Graphing a function of two variables. One can begin sketching a graph by plotting points, but this has limitations.
