Learn the basics behind how a proportional-integral-derivative (PID) controller works and how to implement one on the Arduino hardware! A PID controller is the most common feedback controller used in the industry, but they can also be used for hobbyist electronic projects such as quad-copters, self-balancing robots, temperature controllers, and much more!

This is part 4 of my "Building Robots using Arduino" tutorial series, explaining how you can create robots using Arduino. In this article we will see how we can control the speed of the DC motor using Arduino. Recap. Last week, I explained how we can control the direction of DC motors using the H-Bridge L293D IC.. This week we will see how we can control the speed of the motor as well ...
