[Read] Atlas of Human Hair: Microscopic Characteristics ...

This chapter presents a description of each microscopic characteristic that plays an important role in the forensic comparison of human hair. The microscopic hair structures useful to the forensic hair examiner include the cuticle, the medulla, and the cortex. The cuticle consists of overlapping scales which cover the hair shaft.

Compound and Stereo Microscope Observations. Our hair grows from follicles located under the skin and has two main parts. Part of the hair that remains under the skin inside the follicle is referred to as the root while the part that protrudes to the surface (head, arms etc) is known as the shaft. The base of the root (hair root) is referred to as the hair bulb and is the part through which the base of the hair receives nutrients for the formation of new cells.
