This makes them much more problematic for autofocus to get a good lock. A manual focus helps to ensure a sharp and crisp focus. Analog Lenses. The Polaroid SX-70 Sonar OneStep was the first autofocus single-lens reflex camera. This camera was released in 1978. Every lens before this and many after it had to be focused manually.

Why Use Manual Focus? | How to Manually Focus Your Camera

Manual focus is the process of adjusting the depth of field of a camera lens to bring an image into focus without relying on autofocus or other technical aid. For most of the twentieth century, manual focusing was the

only method of focusing a camera until autofocus became a standard feature of more modern cameras in the 1980's.

What Are the Advantages of Manual Focus in Photography ...

If your camera does not have a built-in AF-Assist lamp, use a bright flashlight and ask someone to point it at your subject while you try to focus. Switch to manual focus mode once focus is acquired, then ask your helper to turn off the flashlight and take a picture without you or your subject moving. Use Manual Focus.

Autofocus Modes Explained - Photography Life

Autofocus is so incredibly quick now, its speed has been said to be nearly as fast as the human eye, and is certainly faster than most of us could accurately focus manually! It is great for most subjects, especially as I said before, sports and nature photography.

Autofocus or Manual - Digital Photography Tips from ATP

However, this is clearly inadequate for the purposes of carefully arranged photography using SLR or rangefinder cameras, where high apertures and longer focal lengths are the norm. In these situations, the photographer is still required to choose the required autofocus frame or select a subject using the manual focus function.

Manual Focusing | ZEISS Photography

Manual focus is for taking over when your camera's autofocus can't do a good enough job. For example, with Milky Way photography, almost no cameras can autofocus on the stars successfully, and manual focus is a must. The same goes in low-contrast environments like a thick fog. Most of the time, though, autofocus is more than good enough.

Manual Focus or Autofocus for Landscape Photography?

Auto focus comes with quickness and precision that manual focus just doesn't have. Therefore, it is the best choice for still photography, hands down. On the other hand, manual focus is usually acceptable for still photography when an auto-focus system is likely to fail or if you're looking to focus precisely on a part of the image.

So When Should You Use Manual and Auto Focus? | Contrastly

However, there are times when manual focus is indeed your best option. Autofocus in Canon DSLRs works well when there is enough contrast (the difference between light tones) on or between subject matter that the camera is able to detect. There are times when subject matter lacks enough contrast for the autofocus to work properly, leaving you with a lens—and really a camera—searching for focus.
