In flight, each engine generator normally powers its own transfer bus. If an engine generator is no longer supplying power, the BTBs automatically close to allow the other engine generator to supply both transfer busses through the tie bus and BTBs. The APU can power either or both busses through the BTBs.

### **B737ng Engine Type - nwdezte.oruee.spiegelzelt.co**

Boeing and CFMI designed the next-generation 737s with a propulsion control system (PCS) that maximizes engine efficiency and operability. The PCS design of 737-600/-700/-800/-900 airplanes is a full-authority digital-electronic engine control, or FADEC, which is significantly different than the PCS on all earlier 737 models.
