Cancer Chemotherapy And Biological Response

Biological therapy, by contrast, uses living organisms, substances derived from organisms, or laboratory-made versions of those substances to act against cancer cells.

How does chemotherapy work?
Most chemotherapy drugs – formally known

Get Free Cancer Chemotherapy And Biological

as cytotoxic (cell-killing) agents - work by destroying cancer cells directly, often by damaging their DNA and causing them switch on their programmed ...

Biological Therapy and Chemotherapy: What Are the ...

Biological response modifiers (BRMs) are compounds that are used to treat cancer by changing or adding to

Get Free Cancer Chemotherapy

And Biological

naturally occurring processes within the body. Immunotherapy makes use of BRMs to enhance the activity of the immune system to increase the body's natural defense mechanisms against cancer.. The immune system is made up of cells called white blood cells.

To help understand the role that biological agents play in cancer treatment some understanding of how the immune system (such as lymphocytes, dendritic cells and macrophages) works is helpful. Biological response modifiers are substances that are able to trigger the immune system to indirectly affect tumors.
