and simple to read.

Delivery And

Continuous

Integration Delivery

And Deployment

Continuous testing is a technique where

automated tests are

integrated with the

software delivery

pipeline, and validate

every change that

flows through it. Tests

execute in each phase

of the pipeline to

validate artifacts

produced in that

Continuous Integration.

Continuous Integration

is a software

development practice

where members of a

team integrate their

work frequently,

usually each person

integrates at least daily

- leading to multiple

integrations per day.

Each integration is

Integration

As I discussed at length in "Super-powered continuous delivery with Git", using prolific branching in your continuous delivery workflow is a Good Thing™. It helps keep your most important branches in a clean and releasable state, allows developers to try new things without stepping on their teammates' toes, and, if done right, makes project tracking easier.

Feature Branching Workflows for Continuous Delivery

Setting up Continuous Integration and Delivery (CI/CD) for NuGet packages is something I've covered previously in this blog post and also in my recent book on Azure DevOps. There is also enough information about this in Microsoft docs.
