On the Settings | General tab check Enable VHF/UHF/Microwave features and Single decode. For EME, check Decode after EME delay to allow for extra path delay on received signals. If you will use automatic Doppler tracking and your radio accepts frequency-setting commands while transmitting, check Allow Tx frequency changes while transmitting. Transceivers known to permit such changes include the IC-735, IC-756 Pro II, IC-910-H, FT-847, TS-590S, TS-590SG, TS-2000 (with Rev 9 or later firmware ...

WSJT-X 2.0 User Guide

The RTL-SDR software defined radio combined with SDRSharp and a program called “digital speech decoder” (DSD) can be used as a radio scanner to easily and cheaply listen to unencrypted digital radio voice conversations. Digital radio voice communications are becoming more commonly used in the radio spectrum.

RTL-SDR Tutorial: Decoding Digital Voice (P25, DMR, NXDN ...

At the end of last month we uploaded a post highlighting the SDRAngel software, which is a general purpose SDR program with some interesting features such as built in digital speech decoders for DMR, D-Star and Fusion. This avoids the need to pipe audio into a separate digital speech decoder program such as DSD+. SDRAngel also has transmit capabilities which makes it useful for SDRs such as ...

The software is an online radio codes generator that is capable to calculate your unique unlock radio code for your device.

Radio Codes Calculator To Unlock Any Car Radio Model By Code

We have a general tutorial on radiosonde decoding available here. There are several software packages that can decode RS41 data, such as the multi-radiosonde decoder Windows program called SondeMonitor (25 euros), or the free Linux command line software called RS. Recently a new free Windows GUI based RS41 decoder has been released by IW1GIS. The software can display on

Google maps the current location and previous path of the radiosonde, as well as it's weather data telemetry.

RS41 RadioSonde Tracking Software - rti-sdr.com

Decoding takes place at the end of a receive sequence and proceeds in two steps. The first decode is done at the selected Rx frequency, indicated by the U-shaped green marker on the waterfall scale. Results appear in both the left (Band Activity) and right (Rx Frequency) text windows on the main screen. The program then finds and decodes all signals in the selected mode over the displayed frequency range.
