So basically, you use some data visualization tools like Tableau or Power BI or Adobe Analytics, make some pretty dashboards with your user data and make inferences. The target market, user sentiments, grouping data, survey data if you have any can be well summarized, etc.. The opportunity to leverage insight from data has never been greater.

User Testing

In a world where analytics rules, design is becoming data-driven. Data forms the cornerstone of our product development process; it can quickly inform development priorities for enhanced user experience, improved user satisfaction and increased adoption rates. In order to keep up with the times, your designs need to be based on data.

## **The Importance of Data in Design | Adobe Blog**

Well-designed on-screen data entry forms that are easy to read with clearly labeled and organized fields could reduce input errors and therefore improve data quality. The requirements for the interface are also important. Consider the following restrictions and checks included in numerous applications which improve data quality:

### **Designing with Data [Book] - O'Reilly Media**

One of the ways you can accomplish “designing in” of data quality is to work closely with the User Interface team. This is even more important when multiple new systems (or major system upgrades) are being designed at the same time, as the opportunity for achieving consistency in the user interfaces then exists.

driven A/B testing, and how you can apply this process to everything from small design tweaks to large-scale UX concepts.

## **Data-Driven Design: Improving User Experience with A/B ...**

In the past, I've often wrestled with designing an optimal relational database model to represent users in a multi-tenant system. I've wanted to get the model just right—enough structure to accommodate future enhancements without bloating the schema with excessive JOINS, overly-wide tables, or any other number of typical relational-database “sins”. Over four years into our current ...
