Plato is a "programming environment". Within Plato, you can create and edit programs and get them to run. Plato's editor is special - it understands the syntax of various programming languages. We tell Plato which language we are using when we create our empty file and save it with a .f95 (FORTRAN 95) extension. Provided you have given your file the appropriate extension, Plato's editor will be able to check the syntax of the program, highlighting the various keywords that it knows about ...
