Friedrich Ludwig Gottlob Frege (b. 1848, d. 1925) was a German mathematician, logician, and philosopher who worked at the University of Jena. Frege, Kant, and the Logic in Logicism. The Philosophical Review, Vol. 111, No. 1 (January 2002) 25. Frege, Kant, and the Logic in Logicism. John MacFarlane. 1. The Problem. Let me start with a well-known story. Kant held that logic and concep-tual analysis alone cannot account for our knowledge of arithmetic: “however we might turn and twist our concepts, we could never, by the mere analysis of them, and without the aid of intuition, discover what is the sum [7+5]” (KV, B16).

Frege is clearly a universalist in the weak sense that he believes his logic is applicable everywhere. It follows that logic would be applicable to metatheoretic reasoning as well and thus that such reasoning cannot provide a non-circular justification of the laws of logic.

Though the matter is controversial, we do not plan to pursue it in this entry.
