Geographical Information Systems In Archaeology

GIS or Geographic Information Systems has been an important tool in archaeology since the early 1990s. Indeed, archaeologists were early adopters, users, and developers of GIS and GIScience, Geographic Information Science. The combination of GIS and archaeology has been considered a perfect match, since archaeology often involves the study of the spatial dimension of human behavior over time, and all archaeology carries a spatial component. Since archaeology looks at the unfolding of historical

GIS in archaeology - Wikipedia

Geographical Information Systems (GIS) is a rapidly developing archaeological method which is moving from the domain of the computer specialist into that of the broader archaeological community. This comprehensive manual on the use of GIS in archaeology explores the concept of GIS and illustrates how it can be adapted for practical use.
