## **GLOBAL WARMING | What is global warming? - BBC News**

“Global warming” refers to the long-term warming of the planet. “Climate change” encompasses global warming, but refers to the broader range of changes that are happening to our planet, including rising sea levels; shrinking mountain glaciers; accelerating ice melt in Greenland, Antarctica and the Arctic; and shifts in flower/plant blooming times.

## **Questions (FAQ) - Climate Change: Vital Signs of the Planet**

Global warming is not a recent phenomenon, it has been a concern since the pre-industrialization era, but the threat is only increasing as the years go by. Global warming is the rise in the average temperature of the globe because the bodies that regulate the temperature like air, water, and nature are being harmed and polluted.

## **Global Warming Speech for Students in English - VEDANTU**

Our personal vehicles are a major cause of global warming. Collectively, cars and trucks account for nearly one-fifth of all US emissions, emitting around 24 pounds of carbon dioxide and other global-warming gases for every gallon of gas. About five pounds comes from the extraction, production, and delivery of the fuel, while the great bulk of heat-trapping emissions—more than 19 pounds per ...

## **Car Emissions & Global Warming - Union of Concerned Scientists**

Although people tend to use these terms interchangeably, global warming is just one aspect of climate change. “Global warming” refers to the rise in global temperatures due mainly to the increasing concentrations of greenhouse gases in the atmosphere. “Climate change” refers to the increasing changes in the measures of climate over a long period of time - including precipitation ...
