Production - Food ...

Food production from farm to fork, in general, simply means processing raw materials from the primary sector such as the farm and the sea into food in the food factories, fulfilling the consumer demand. The food then undergoes further preparation or minor processing before it is served for consumption.

Food Production - Different Types and Methods of Food ...

Industrial agriculture is currently the dominant food production system in the United States.

It's characterized by large-scale

monoculture, heavy use of chemical

fertilizers and

pesticides, and meat production in CAFOs

(confined animal feeding operations).

The industrial approach

Production Production

means growing the plants we harvest or raising the animals we use for food. Most food comes from domesticated animals and plants, and their production occurs on farms or ranches.

Some foods are caught or harvested from the wild, such as some fish, mushrooms, and game.

Transforming The Food Industry

Most food produced for the food industry comes from commodity crops using conventional agricultural practices.

Agriculture is the process of producing food, feeding products, fiber and other desired products by the cultivation of certain plants and the raising of domesticated animals (livestock).
