width versus device-width. In CSS media the difference between width and device-width can be a bit muddled, so let's expound on that a bit. device-width refers to the width of the device itself, in other words, the screen resolution of the device. Let's say your screen's resolution is 1440 x 900. This means the screen is 1440 pixels across, so it has a device-width of 1440px.

CSS media queries: width versus device-width

The sum of pixels which are displaying on a device is called as "Screen Resolution". and sum of actual pixels of any device is referred to as "Viewport". Apple iPhone 5s have 4.0" physical screen size and its resolution is about 640 x 1136 Pixels with approximately 326 PPI pixel density
