4 MATHEMATICS FOR ECONOMISTS 2.16, 17 a) $f(x) = \begin{cases} 5x & \text{if } x > 0 \\ 2x & \text{if } x = 0 \\ 0 & \text{if } x < 0 \end{cases}$. As x converges to 0 both from above and below, $f(x)$ converges to 0, so the function is C1. See figure. b) This function is not continuous (and thus not differentiable). As x converges to 0 from above, $f(x)$ tends to 1, whereas x tends to 0 from below, $f(x)$ converges to 0.

Mathematical Economics Practice Problems and Solutions - Second Edition - G. Stolyarov II. 11. We first find the intersection of $x + y = 100$ and $x + 2y = 140$, which occurs at $x = 100 - y = 140 - 2y$, which means that $y = 40$ and $x = 60$. At $x = 60$, $y = 40$, $a \cdot \ln(x) + b \cdot \ln(y) = 4.094344562a + 3.688879454b$.

8MATHEMATICS FOR ECONOMISTS 3.10 In this exercisex is the market price, which is a choice variable for the $p(x) = 5x(152 - x) - 2.5(152 - x)$. This function is concave, and its first derivative is $p'(x) = 5(152 - 2x) - 2.5$. 3.11 From the information given, the demand function must be computed. The function is linear, and the slope is -2 .
