metrics: Success rate, called also completion rate and the number of errors. Success rate/ completion rate: is the percentage of users who were able to successfully complete the tasks. Despite the fact that this metric remains unable to provide insights on how the tasks were performed or why users fail in case of failure, they are ...

Usability Metrics: A Guide To Measuring The User Experience

RAIL is a user-centric performance model that provides a structure for thinking about performance. The model breaks down the user's experience into key actions (for example, tap, scroll, load) and helps you define performance goals for each of them. RAIL stands for four distinct aspects of web app life cycle: response, animation, idle, and load.

In response to the need for a shorter questionnaire, Finstad [pdf] introduced the Usability Metric for User Experience (UMUX) in 2010. It's intended to be similar to the SUS but is shorter and targeted toward the ISO 9241 definition of usability (effectiveness, efficiency, and satisfaction).

Measuring Usability: From the SUS to the UMUX-Lite

These are (a) self-presentation, or the creation of a virtual identity on the SNS; (b) action and participation, comprising the different behaviors that can be performed on an SNS (e.g., retweeting, liking, friending); (c) uses and gratifications, which cover the user's motivations for using the SNS, such as for social or informational purposes ...

Beard-second (distance) A unit inspired by the light-year, but for extremely short distances. A beard-second is defined as the length an average physicist's beard grows in a second (about 5 nanometers). Moot (distance) One smoot is defined to be equal to five feet and seven inches (1.70 m), the height of Oliver R. Smoot.

This chapter aims to present best practice in measuring subjective well-being. It covers both the range of concepts to be measured and the best approaches for measuring them. This includes considering issues of sample design, survey design, data processing and coding and questionnaire design. In particular, the chapter presents a single primary measure intended to be collected consistently ...

A tape measure or measuring tape is a flexible ruler used to measure size or distance.. It consists of a ribbon of cloth, plastic, fibre glass, or metal strip with linear measurement markings. It is a common measuring tool. Its design allows for a measure of great length to be easily carried in pocket or toolkit and permits one to measure around curves or corners.

Electronic cigarettes are designed to deliver a nicotine-containing aerosol to the user. According to the 1988 Surgeon General's report The Health Consequences of Smoking: Nicotine Addiction, "Nicotine is the drug in tobacco that causes addiction" (HHS, 1988, p. 9). Because dependence on tobacco is produced primarily through the pharmacological effects of nicotine (Benowitz, 2009), an ...
