Metric/AWG wire size equivalents. This table gives closest equivalent size cross references between metric and American wire sizes. In Europe, wire and cable sizes are expressed in cross sectional area in mm², and also as the number of strands of wires of a diameter expressed in mm. For example, 7/0.2 means 7 strands of wire each 0.2mm diameter.

sectional area of 0.22mm^2 . In America, the commonest system is the AWG numbering scheme, where the numbers are applied not only to individual strands but also to equivalent size bunches of smaller strands. For example 24AWG could be made of 1 strands of 24AWG wire (1/24) or 7 strands of 32 AWG wire (7/32). See also: AWG to metric Parameter Calculator.

Used frequently in measuring very large wire sizes. The circular mil is a unit of area used especially when denoting the cross-sectional size of a wire or cable. It is the equivalent area of a circle whose diameter is 0.001 (10⁻³) inch, or approximately 0.7854 millionths of a square inch (or 2.5×10^{-7}
