1 in a Fourier series, gives a series of constants that should equal $f(x)$. However, if $f(x)$ is discontinuous at this value of x , then the series converges to a value that is half-way between the two possible function values $f(x)$. Fourier series converges to half-way point

GATE ECE 2002 - ExamSIDE Questions

In mathematics, a Fourier series (or $f(x)$) is a periodic function composed of harmonically related sinusoids, combined by a weighted summation. With appropriate weights,

one cycle (or period) of the summation can be made to approximate an arbitrary function in that interval (or the entire function if it too is periodic). As such, the summation is a synthesis of another function.

A doesn't mean the signal has a term $A \cdot \exp(j \cdot \omega_0 \cdot t)$. Instead you have to integrate over a spectral band to compute the corresponding time-domain function. As the bandwidth shrinks to 0, the time-domain value becomes infinitesimal -- unless the spectral band contains a delta ...
