Founded in 2002 by Nobel Laureate Carl Wieman, the PhET Interactive Simulations project at the University of Colorado Boulder creates free interactive math and science simulations. PhET sims are based on extensive education research and engage students through an intuitive, game-like environment where students learn through exploration and discovery.

In this experiment external forces such as applied force and friction are used on the carts. An applied force, which in this experiment is the plunger is used in order for the carts to be able to begin their motion. Also while on the cart, the external force of friction is seen as acting on the cart while it is in motion in order to slow it down.

Conductors contain free charges that move easily. When excess charge is placed on a conductor or the conductor is put into a static electric field, charges in the conductor quickly respond to reach a steady state called electrostatic equilibrium. Figure 1 shows the effect of an electric field on free charges in a conductor.
