Plane And Spherical Trigonometry

Spherical trigonometry is the branch of spherical geometry that deals with the relationships between trigonometric functions of the sides and angles of the spherical polygons defined by a number of intersecting great circles on the sphere. Spherical trigonometry is of great importance for calculations in astronomy, geodesy, and navigation. The origins of spherical trigonometry in Greek mathematics and the major developments in Islamic mathematics are discussed fully in History of trigonometry an

PLANE AND SPHERICAL TRIGONOMETRY 3.1 Introduction It is assumed in this chapter that readers are familiar with the usual elementary formulas encountered in introductory trigonometry. We start the chapter with a brief review of the solution of a plane triangle.

CHAPTER 3 PLANE AND SPHERICAL TRIGONOMETRY

Spherical trigonometry is the basis for navigation; engineering depends on large part on trig. There's a sensitivity to real-world applications that is lacking in newer math textbooks. Read more

Furthermore, most formulas from plane trigonometry have an analogous representation in spherical trigonometry. For example, there is a spherical law of sines and a spherical law of cosines. For example, there is a spherical law of sines and a spherical law of cosines.

1 Introduction. The sides of a spherical triangle are arcs of great circles. A great circle is the intersection of a sphere with a central plane, a plane through the center of that sphere. The angles of a spherical triangle are measured in the plane tangent to the sphere at the intersection of the sides forming the angle.

Spherical Trigonometry

Spherical Trigonometry. Let a spherical triangle be drawn on the surface of a sphere of radius r , centered at a point O , with vertices A , B , and C . The vectors from the center of the sphere to the vertices are therefore given by \vec{OA} , \vec{OB} , and \vec{OC} . Now, the angular lengths of the sides of the triangle (in radians) are then α , β , and γ , and the actual arc lengths of the side are $r\alpha$, $r\beta$, and $r\gamma$.
