FPD is a common condition amongst commercially grown turkey poults. It causes the skin of the footpad to become hard and scaly, often developing horn-like pegs of abnormal keratin. The footpad can become swollen, frequently splitting. In the centre of the lesion the epidermis separates, and is often totally necrotic.

The Foot In Diabetes Aetiology And Clinical Management [EBOOK]

During the last twenty years, considerable research efforts have recognized the consequences of foot-related lameness primarily in cattle, and meat and wool sheep. Despite the lack of extensive epidemiological studies, field observations and isolated research reports in dairy sheep have suggested that the problem might be more severe in semi-intensive and intensive farming systems. Footrot ...

Aetiology, Risk Factors, Diagnosis and Control of Foot ...

Athlete's foot, also called tinea pedis, fungal infection of the feet, a form of ringworm.The skin areas most commonly affected are the plantar surface (sole) of the foot and the web spaces between the toes. It is estimated that at least 70 percent of all people will have a fungal foot infection at some point in their lives.
