Flutter is Google's UI toolkit for building beautiful, natively compiled applications for mobile, web, and desktop from a single codebase. In this codelab, you learn how to build a Flutter UI from the ground up in an IDE. You also customize your user interface for both Android and iOS, and then build and run your app.

Building beautiful UIs with Flutter - Google Codelabs

Most applications you build will use a combination of the JS API and the CSS selectors provided by the fullscreen specification. The main JS API's that you need to care about when building a fullscreen experience are: element.requestFullscreen() (currently prefixed in Chrome, Firefox, and IE) displays the element in fullscreen mode.

The grid CSS property is a shorthand property that sets all of the explicit and implicit grid properties in a single declaration... Using grid you specify one axis using grid-template-rows or grid-template-columns, you then specify how content should auto-repeat in the other axis using the implicit grid properties: grid-auto-rows, grid-auto-columns, and grid-auto-flow.
