Reference > Language > Structure > Control structure > Break break [Control Structure] Description. break is used to exit from a for, while or do... while loop, bypassing the normal loop condition. It is also used to exit from a switch case statement. Example Code. In the ...

break - Arduino Reference
Like if statements, switch case controls the flow of programs by allowing programmers to specify different code that should be executed in various conditions. In particular, a switch statement compares the value of a variable to the values specified in case statements. When a case statement is found whose value matches that of the variable, the code in that case statement is run.
