Rattle/knocking noises The Toyota Hilux 3.0 D4D tends to have a rattling noise at low revs. One could easily mistake this noise for an injector failure, but below the 2000 rpm mark it tends to do that, especially in the morning when the engine is cold. After about 1-2 km, the noise may go away as the engine heats up.

heats up, the noise may go away.

A few potential faults on the Toyota Fortuner 3.0 D4D ...

As the engine runs, it turns a belt that's connected to various pulleys throughout the engine bay. This belt must be under the exact right amount of tension so that it turns smoothly and quietly. If the belt becomes stretched out, the tensioner isn't working properly, or one of the pulleys becomes bent out of shape, you can hear rattling, clicking and slapping noises that might be mistaken for engine knock.

6 Causes Of Knocking Sound From The Engine - Capitol Toyota

A rattling heat shield would likely be an exhaust heat shield, designed to protect the body of the car and some engine components from the high heat of the exhaust. The exhaust manifold likely has a heat shield and the bolts that hold it in place often rust out and leave the shield loose, and rattling.
